The UBC Faculty of Medicine
Department of Anesthesiology, Pharmacology & Therapeutics
is proud to announce the inaugural
Dr. Jean Templeton Hugill Visiting Professor Lecture

“A TALE OF THREE GREY HAIRS:
Initiating, developing and sustaining a career
as a research scientist”

Dr. Hemal H. Patel
Associate Professor, Departments of Anesthesiology and Pharmacology
University of California, San Diego

Wednesday, September 17, 2014 at 6:00 pm

Cordula & Gunther Paetzold Lecture Theatre, Vancouver General Hospital
855 West 12th Avenue, Vancouver, B.C.

Light refreshments will be served at the atrium prior to the lecture.

Dr. Jean Templeton Hugill was one of the first female anesthesiologists in Western Canada in the 1950s. She earned a reputation for taking on difficult cases and became a key figure in developing obstetric anesthesia in B.C. After a long career devoted to clinical care, Dr. Hugill was determined to support anesthesia research, which she said she was always interested in but unable to pursue herself. Motivated to facilitate collaborative research between anesthesiologists, pharmacologists, and engineers, Dr. Hugill left a bequest to the Faculty of Medicine upon her death in 2012, adding to the gift she had previously made in 1991 that was matched by the B.C. government to establish an endowed Chair in Anesthesia.

Dr. Hemal Patel is an Associate Professor in the Departments of Anesthesiology and Pharmacology at the University of California, San Diego. Dr. Patel’s research interests include the use of cellular and whole animal approaches to understand physiology/pathophysiology in different organ systems and has expanded to explore relationships in the heart looking at ischemia-reperfusion injury, heart failure, diabetic cardiomyopathy, and cardiac aging.
